

INDEPENDENT SOFTWARE VENDOR [ISV] CERTIFICATION

Acer's Veriton workstations are ISV certified. ISV certification ensures software application and hardware devices are compatible, stable and reliable when handling heavy workloads. ISV is a badge of honour. It provides professional users with a peace of mind and confidence to know that these professional software applications will run on Acer Veriton Workstation, and the hardware solution has been tested, proven and certified to deliver optimal performance for your chosen key applications.

ISV CERTIFIES STABILITY, RELIABILITY AND PERFORMANCE

Certification from Independent Software Vendors (ISVs) ensures the most critical applications run reliably on our hardware, providing optimal performance and a high-quality user experience.

Our technology partners work closely with us in the ISV certification process testing, optimizing, and certifying as part of a whole system solution or directly with the ISV for optimal compatibility at a component level. For instance, Intel® Xeon® processors are certified for reliability, too.

These tight partnerships ensure an absolutely compatible experience between hardware and software that is stable and designed to perform.

Acer Veriton workstations are tested and certified by ISVs from all the major vendors, like Altair and PTC.

Altair HyperWorks offers solutions for engineers - from model-based systems design and early geometry ideation, to detailed Multiphysics simulation and optimization, while PTC has developed Creo, a suite of Computer-Aided Design (CAD) apps supporting product design for discrete manufacturers.
