ACER PRODUCT CUSTOMIZATION

No matter how large or small your organization, you can rely on Acer products to run your activities smoothly. Acer products are easy to use, manage and deploy. Incorporating innovative design features and multi-level security solutions, they are built to last and to protect your information and network from malware and other threats. A wide range of powerful, energy-efficient processors and superior graphics solutions deliver outstanding productivity and enhanced multitasking.

✔ To better meet the needs of each customer, Acer products come in a full range of form factors and configurations. However, customers may have more specific requirements that are not covered by default options.

✔ Now Acer has taken the concept of customization a step further by offering its customers a unique service: to have their devices rapidly built to their own specifications. What's more, you are entitled to this personalization opportunities on orders of as few as 200 devices.

6 WAYS TO PERSONALIZE YOUR ACER DEVICE

HOW CAN ACER PRODUCTS BE CUSTOMIZED?

1. Customer OS image

Very often, the first thing organizations do when they purchase new desktops is to wipe the hard disk clean and reinstall OS and applications to suit their own requirements. Acer can help its customers save time and resources by doing this job upfront. Just provide your OS image before production and when you receive your new devices they only need to be plugged in, as they are built from scratch to meet your organization's needs.

2. Customer SBIOS settings

If your organization adopts bespoke SBIOS settings, you can have them installed by Acer during production and save IT time and resources. All you have to do is let Acer know which SBIOS default settings you prefer. You can set up a BIOS or HDD password, choose which USB or SATA ports enable or disable, specify a SBIOS language, define a specific boot order, enable or disable Wake On Lan and more...

3. Install your organization's SBIOS Logo

You can also opt to have your organization's logo as the SBIOS splashscreen. This means that every time you boot a device, the end user will see your logo instead of the Acer logo. Just give Acer the image before production, and the devices will be tailor made for you.

4. Frozen components

In standard production, computer components may be supplied by different vendors. If you wish, you can choose to keep a specific key component part number or vendor for all your machines, even if ordered at different times. In addition, Acer can make sure that every related order will have the same component (even vendor) for all production.

5. Customer Text on Bezel / Housing

For security reasons or for keeping track of your assets, you may like to add a personal touch to your devices. Acer can apply your logo or a text on housings or bezels during production, saving you the trouble of placing stickers that can be peeled off.

6. Clean OS Image

Don't lose time removing pre-installed acer applications and software. You can request a Clean Operating System Image. Acer will supply a pure OS image without any extra application.
